

3 Rivers Wet Weather Rain Barrel Program

What is a Rain Barrel?

A rain barrel is a practical and environmentally sound method for controlling stormwater, which contributes significantly to sewage overflows polluting our rivers and streams.

Why a Rain Barrel?

Rain barrels are custom designed to work day in and day out to keep rainwater out of storm drains and sewers. Connected to your home's downspout, the rain barrel collects stormwater during each rainfall. During dry weather, a hose connected to the barrel allows the water to seep out to water your garden and replenish the groundwater table.

How does it Work?

RiverSides® Rain Barrels are secure and safe. The barrel's solid one-piece construction is designed to provide worry-free use. Each barrel is made of UV-stabilized Low Density Polyethylene (LDPE) to prevent warping, fading or cracks, and has

a unique two-stage filter system. The first-stage filter retains leaves, twigs and roofing materials. Our 200-micron mesh second-stage filter makes the rain barrel mosquito-safe, and stops sediment and other fine particles.

Installation

All rain barrels require simple assembly. Installation is easy. Instructions are provided with each rain barrel.

Cost

Green Rain barrels	\$130
Millstone Grey Rain Barrels	\$150

To Order
